

Site Furniture Cleaning Instructions

All exterior site furnishings require regular cleaning to keep surfaces looking and performing as intended throughout the lifespan of the product.

Instructions to clean plastic lumber:

Recycled Plastic Lumber is very easy to maintain and is not affected by most chemical products.

For basic cleaning: use a mild soap/detergent or a water/vinegar solution and a stiff-bristled brush. Rinse clean with running water.

Grease stains	Household grease remover
Mould	Mild soap solution
Rust	Mild soap solution
Scratches, burns	Light sanding/brushing, stainless steel brush

Bench and table plastic lumber surfaces that have not been cleaned for over 2-3 years can be brought back to their original surface with water, an SOS pad, and vigorous scrubbing.

Minor scratches can be repaired by using a standard electric heat-gun (or hand held acetylene torch) and a metal putty knife to heat and smoothen over the plastic. Test on a non-visible area first to practice.

Power Washing

Include an annual power-wash of your site furnishings in your maintenance schedule. For power-washer/pressure jet cleaner: maintain a distance no closer than 4-5 inches, and pressure no greater than 1200psi.

Instructions to clean powder-coated steel or aluminium furniture structure:

Use mild soap, water, and a clean cloth to wipe down and wash your furniture structure.
